

OPEN AGENT COMMERCE

How your AI agent shops for you – safely.

ISSUE #1

MAYA

the user

ADA

the AI agent

VEE

the broker / verifier

SHOPS

services / merchants

Consent in. Proof out. No keys. No custody.

1 THE ASK

MAYA

“Sign me up for NewsApp.
Keep it under ₹500 / month,
and you can cancel anytime.”

ADA

Maya delegates a task to her agent — in plain words. She states what, how much, and that she stays in control.

2 CONSENT, SIGNED ONCE

MAYA

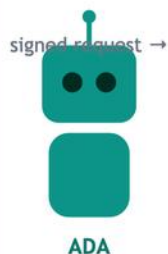

User Consent Mandate

- scope: news / media
- cap: ₹500 / month
- valid: 12 months
- revocable: anytime

✓ signed (Ed25519)

She signs **once**, on her own device. This one mandate bounds every future action – scope, caps, and time. **She can revoke it instantly.**

3 THE GAUNTLET

VEE runs the verify chain

signature

mandate

ucm

kyc

scope

amount

intent

velocity

replay

first failure → bounced. anything off → REJECT.

hash-chained

Every request runs a fixed gauntlet of checks. **Each step seals a tamper-evident note** into a chain – so later, you can prove exactly what happened.

4 THE ACCOUNT IS YOURS

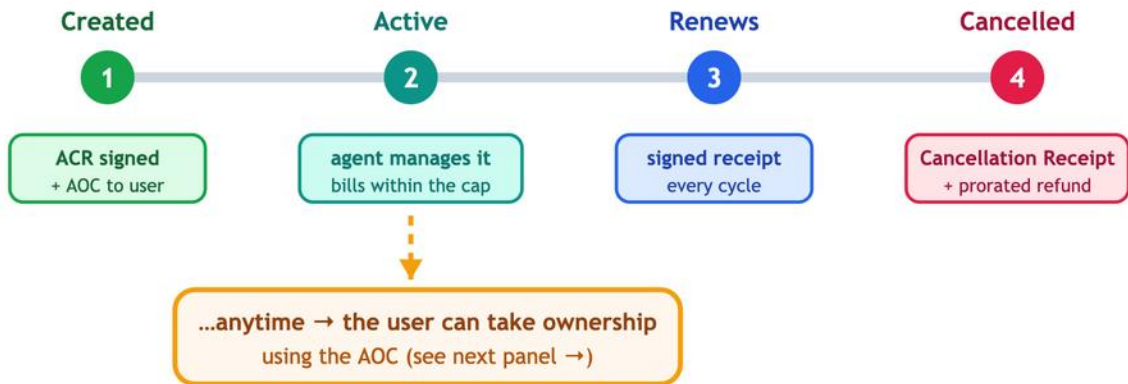

The account gets created — and Maya receives an **Ownership Certificate**.
Even if the broker vanished tomorrow, **the account is hers to claim directly**.

5 PAY — WITHIN BOUNDS

Spending is checked against the consent caps on **every** transaction.
Within bounds, it just works. **Over the line, the agent must ask Maya first.**

6 THE ACCOUNT'S LIFE

An agent-provisioned account has a full life – created, active, renewed, cancelled – and **every transition emits a signed receipt**. Cancelling returns a prorated refund.

7 TAKE IT BACK

The Ownership Certificate is a **direct path to claim the account at the service itself**.
Single-use, service-signed — Maya takes full control **even if the broker disappears**.

8 ONE REFEREE FOR EVERY RAIL

Consent in. Proof out. No keys. No custody.

Agents arrive over many rails. Open Agent Commerce normalizes them all into **one verifiable request** — so one neutral referee checks them the same way.

Two ways to build with us

BUILDERS / CONTRIBUTORS

It's an open standard — MIT + CC BY 4.0.

Implement it, port it to your language,
file issues, or become a maintainer.

SAAS FOUNDERS

AI agents are a new acquisition channel.

Let an agent onboard users to your product
with consent + an audit trail. You keep billing.
